GPS TRACKING SYSTEM

GPS & GSM tracker is a tracking device with built-in GPS & GSM modules with compact size. It can transmit longitude & latitude coordinate to your cell phone by the short message service, then you can find its location on the Google maps or any other map software. What is more, you can get your car under control through cell phone short message. This technology is a cost effective means of keeping your business on track and it works using GPS satellite communication with the receiver unit fitted in your vehicle. GPS tracking systems work by receiving exact microwave signals from satellites, which can determine a vehicle's precise location, speed and direction.

A Vehicle tracking system combines the use of automatic vehicle location in individual vehicles with software that collects these fleet data of vehicle location. Modern vehicle tracking system commonly uses GPS (Global Positioning System) technology for locating the vehicle. Vehicle information can be viewed on electronic maps via the Internet or specialized software. Urban public transit authorities are an increasingly common user of vehicle tracking systems, particularly in large cities.

1. PERSONAL TRACKING SYSTEM

The personal GPS tracker items is hot sales over the world, the GPS tracker items is available for active map location, with SOS panic button for emergency help. Two way voice communication and voice chatting features, PS SOS and GEO-fence features are available for prevent the kids kidnap, prevent the sexual assault ladies and Kids, it is helpful for elderly easy to find way home and also good for sick people once in emergency situation for alert alarms.

MRR supported Tracker is specifically designed to help women reach out to those who can help instantly. The receiver has superior sensitivity and can connect SOS calls instantly. The tracking equipment assures instant tracking allowing the victim's location identified instantly so that necessary assistance can be provided.

2. SCHOOL BUS TRACKING

School / College / Company bus route discovery & stops marking, instant SMS alerts / mobile app notification to students/parents/employees on arrival & departure of Bus to their Bus stops, route deviation alerts etc.

We can keep your children safe on the School bus Travel. We're leading in vehicle tracking mobile apps that provide information to parents and school employees as and when the children are being transported between school and home. With our innovative GPS Tracking solution, parents can track the school bus using IOS/ Android Apps or receive SMS notifications just 5-10 minutes before the bus reaches their designated stoppings. We communicate up-to-the-minute school bus location directly to the parents, caregiver and school administrator smartphones and computers via interactive maps. In-vehicle Remote controlled cameras provide options for the transport managers to have complete view & control on the In-Vehicle activities.

When boarding the bus, your child will have assigned RFID card that will be captured by our RFID reader module without human interaction like swiping / showing. Using RFID, child boarding can be completely tracked and notified to parents.

Our trip sheet technique makes sure that the notifications are sent only during designated pick-up and drop trip of a school bus. Any other movements of the school bus (like during holidays & non-business hours) are not shared with parents. Non-School trip movement information of a vehicle is available only for the school management. We also provide route deviation alerts, live traffic conditions to the transport managers.

We also send information via text to all the parents related to their ward boarding the bus at the right stop.

3. FLEET TRACKING SYSTEM

Fleet tracking system is a service enabled through positioning technology that includes GPS, GPRS. Fleet tracker helps you to track, manage and control the vehicles in your fleet. With the aid of our Fleet tracking application, you will be able to access the information online. With options of multiple reports and alerts via web and SMS, you will always be informed of your vehicle where about and its key statistics such as speed, idling, route, and status of sensors including ignition, hydraulics, fuel etc...This simple yet affordable technological solution comes to you from fleet Tracking System.

4. TWO WHEELER SECURITY SYSTEM & GPS TRACKING DEVICE

GPS Security Tracking System for bikes is an advance and is the latest technology. This GPS device for the bike is to track your bike live on a map. If your bike is stolen, you will get an SMS alert and you can switch off your bike engine just by sending SMS to your bike's Security system.

CLOSED CIRCUIT TELEVISION SYSTEMS (CCTV)

Closed Circuit Television (CCTV) is a private or closed video system where viewing of the video is restricted to a specific group of individuals. Systems can range in size from being within a single building, to a complex of buildings, to large campuses and city centers, and can even span across a continent. Such monitoring of areas and/or activities may be used for security, safety, Industrial, or private purposes. The visual images created by a CCTV system may be viewed while an event is happening or recorded for 'after-the-fact' review either on-site or off-site. Review is done via the use of DVR storage and any other computer based mediums. Such reviews of prerecorded visual information may also be done 'remotely' through the use of telephone lines, fiber optics, microwave, the internet, and/or a host of other such transmission methods according to the design and complexity of the CCTV system.

Our solutions include:

- Video Surveillance
- Digital Video Recorders (DVR's)
- Video Cameras/IP Cameras
- Wireless Networking
- Motion detection & email alerts
- Two way talk, built in speaker & microphone
- Video Management Systems/Software
